

Greater Insight

NUTRITION

Choose the right diet based on a predisposition to certain conditions.

CANCER RISK

Early diagnosis is key to many cancer treatment plans that aim to prolong a good quality life.

HEREDITARY DISEASE

Screening for genetic diseases helps to take preventative measures and diagnose more quickly.

BEHAVIOR

Create a lifestyle for your pet to thrive based on the genetics of social behavior.

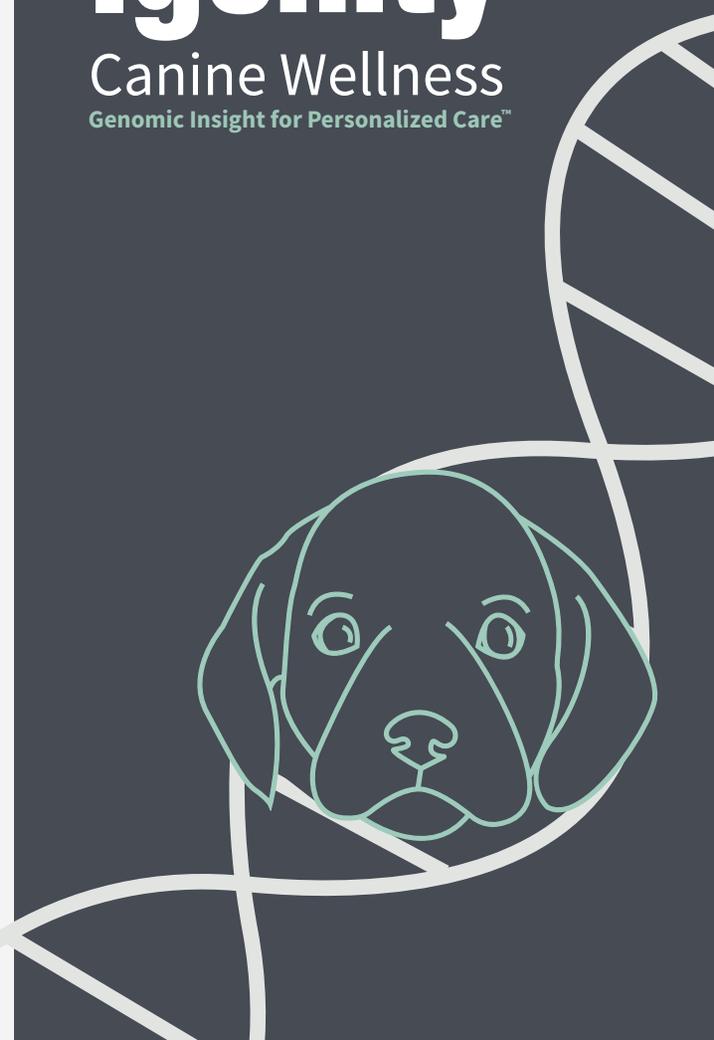

Easy as...

- 1** Talk to your veterinarian and ask for the test to be done.
- 2** Your veterinarian will take a non-invasive cheek swab.
- 3** Your veterinarian will analyze the results of the test and make specific recommendations for the absolute best care of your new furry friend.

Talk to your veterinarian about personalized care through DNA testing.

Doing everything to keep your new puppy happy and healthy?

The first year of a puppy's life is so important for laying the foundation of a long, healthy life.

DNA testing is an easy, affordable step for a personalized puppy-health assessment. Our aim is to provide information based on the component of the genetic risk that we know today. This will provide useful information in the form of genotype results which over time will be correlated with more clinical outcome data to expand the level of genetic risk that we can explain with genomics.

One example would be the decision to spay a patient prior to the first heat cycle if they carry a variant for mammary cancer and are not likely to be used for breeding. Spaying at a young age significantly reduces future risk for mammary tumors.

What is it?

Igenity Canine Wellness is a tool to help pet parents plan ahead for the health of their dogs. Igenity Canine Wellness profiling works just like DNA tests for people. It uses simple cheek swab sampling — painless and stress free. When we see your puppy at its next checkup, a wellness report based on advanced DNA testing will help us work together on your puppy's unique wellness plan.

Why test?

Igenity helps us make a wellness plan and be watchful for future health issues with your canine family members. We can collect data that will build our knowledge about genetics and strengthen the accuracy with which we can predict and influence lifelong canine health.

The NEOGEN difference.

We send our DNA tests to NEOGEN, the world leader in animal genomics. They have been doing animal DNA testing since 1998. NEOGEN uses the same technology that is used for human DNA testing.

The results.

We'll go through the results with you and make plans to manage any increased genetic risk through proactive healthcare, nutrition and lifestyle.

Igenity® Canine Wellness

Igenity Canine Wellness is available exclusively through Veterinary Hospitals. Results enable your veterinarian to care for your pet on a more individual basis. Please contact your veterinarian to make an appointment for testing or if you have any questions about results.
