Multiplex™ bait station

Instructions Important! Always read and follow bait label instructions before using these products.

1
To open the bait station, insert the key into the two holes in the latch using firm pressure.

2
Following bait directions, place Havoc®-XT blocks, Ramik® Mini-Bars or CyKill™ blocks on the horizontal and vertical securing rods.

3
Lock the station by simply closing the lid.

4
Place the station with the entry openings along a wall where rodents travel.

5
Following bait directions, check and refill bait as needed to ensure a constant supply of fresh bait.

Mouse Snap Traps
 • Both sides of bait chamber can house standard plastic mouse snap traps

Station Strength

- All exterior walls of stations are double wall for super strength
- The interior walls are single wall to reduce station size
- The edges of the cover rest 100% on the top of the exterior walls (for support)

Tamper Resistance

- Overlap of cover edges prevents "finger holds" for high tamper resistance

Hassle-Free Cover

- No need for side opening—cover will stand up out of the way against the wall
- Water can drain out, unlike other stations
- Station can be fit flush to a foundation

Entrances

- No lip to step over as with most other stations; gradual ramp leads rodents to the bait

Bait Chamber

- Grey color keeps internal temperature cooler, resulting in less melted bait
- Vertical and hanging block layouts
- Vertical bait rods can withstand 1 inch of standing water; rods have a low (0.75") and high (1.2") water option
- Horizontal rods lock in place and can't move even if station is shaken
- Horizontal rods are locked in position when the lid closes to keep bait secure
